CloudDevices lua objects

Cloud device description.

```lua
{
    battery_powered = 0,
    capabilities = {
        "text_command",
        "ui_flag_alexa_account"
    },
    category = "assistant",
    device_type_id = "alexa_account",
    id = "01234567-89AB-CDEF-0123-456789ABCDEF",
    info = {
        account = "user@domain.com",
        vendor = "alexa"
    },
    name = "01234567-89AB-CDEF-0123-456789ABCDEF",
    protocol = {
        vendor = "alexa"
    },
    reachable = 1,
    reachable_reason = "assistant.voice",
    security = "high",
    subcategory = "voice",
    type = "assistant.voice"
}
```

field	type	description
battery_powered	int	battery 1 or not 0
capabilities	array of strings	List of supported Capabilities
category	string	Category of device
device_type_id	string	Device type ID. It's the same for the equal devices.
id	string	Device ID
info	object	Useful information about device

name	string	Recommended name of device
protocol	object	Protocol used for communication with this device
reachable	int	is it accessible `1` now or not `0`
reachable_reason	string	reason of inaccessible state
security	string	security level of connection between cloud and smart device
subcategory	string	Subcategory of device
type	string	Type of device
